HOW TO READ THIS RULEBOOK

This rulebook applies to every registered team. Registering means you accept all rules in it. Dates, fees and facts match the official event website. Anything not stated here will be announced through the official channels listed in Section 23, and the latest announcement prevails.

01 ABOUT AGENTCRAFT

AgentCraft is the National Agentic AI Challenge for Sustainable Development Goals (SDGs). It is organised by the **ASTRA Student Association** (Department of CSE-AIML) in association with the **AAAI Global Professional Chapter** and **AlgoVedas**, at **MIT Academy of Engineering (MIT AOE), Alandi, Pune**.

The challenge goes beyond simple chatbots. Student teams build autonomous multi-agent systems that plan, use tools, recall memory and cooperate to solve real-world problems aligned with the United Nations SDGs.

PILLAR	WHAT IT MEANS
REASON	Goal decomposition and reflective planning
ACT	Multi-tool integration and API execution
IMPACT	Solutions that advance the Sustainable Development Goals

ORGANISING BODIES

ASTRA Student Association PRIMARY ORGANISER Dept. of CSE-AIML, MIT AOE. Leads challenge operations.	**AAAI Global Professional Chapter** PROFESSIONAL CHAPTER Global AI professional association advancing research and responsible AI agents.	**AlgoVedas (CSE AIML)** DEPARTMENT SOCIETY Department technical community driving hackathons and intelligent systems.

Host institution: MIT Academy of Engineering, Alandi, Pune (An Autonomous Institute Affiliated to Savitribai Phule Pune University).

02 CHALLENGE OBJECTIVES & THEME

THEME

AI for Sustainable Development Goals. Build Intelligent Agents. Solve Real-World Problems. Create Sustainable Impact.

Objectives of the challenge:

- Get students to design and build working agentic AI systems, not just slides.
- Tie every solution to a real-world problem and a specific UN SDG.
- Reward real-world deployability and social impact.
- Test reasoning (planning), action (tool use) and impact together in one demo.
- Give first-year students their own evaluation bracket so they can compete fairly.
- Connect top teams with industry partners for internship opportunities.

03 ELIGIBILITY CRITERIA

- Open to **FY, SY, TY and Final Year** students.
- Only students can be team members. A mentor is optional and is not a team member.
- Interdisciplinary teams across all the branches are welcome (open to all) .
- A team with members from different years competes in the stream of its most senior member.
- A student can belong to **one team only**.

EVALUATION STREAMS

STREAM	WHO	JUDGED MAINLY ON
Stream A	FY (separate evaluation)	Conceptual understanding, creativity and foundational agentic logic
Stream B	SY, TY and Final Year	Architectural rigor, multi-agent tool loops, autonomous error recovery and benchmark performance on SDG domains

04 TEAM FORMATION & REGISTRATION

ITEM	RULE
Team size	2 to 4 students
Mentor	1 mentor, optional. Not counted in team size.
Registration fee	**₹400 per team.** Covers the online screening and the offline finale.
Deadline	**30 October 2026**
Where to register	REGISTER button on the official website
Team leader	One student is the single point of contact for the team

HOW TO REGISTER

1. Form your team (2 to 4 students), pick a team name and choose a team leader.
2. Register through the official website before **30 October 2026** and pay the ₹400 team fee.
3. Join the official WhatsApp Community. Problem statement templates, datasets and announcements are shared there.
4. Finalise your roster by the deadline. Member changes after that need written organiser approval.

> **FEE POLICY**
> The registration fee is non-refundable, except if the organisers cancel the event. Keep your payment receipt.

05 COMPETITION TIMELINE & IMPORTANT DATES

STAGE	DATE	MILESTONE	MODE
01	30 Oct 2026	Registration closes	Online
02	2 Nov 2026	Round 1: Online submission deadline	Online
03	17 Nov 2026	Round 2: Grand Finale	Offline, MIT AOE, Alandi, Pune

	ROUND 1: ONLINE SCREENING	ROUND 2: OFFLINE FINAL
Date	2 November 2026 (submission deadline)	17 November 2026
Format	Online PPT + Solution + AI Agent Demo	Offline final presentation
Mandatory items	Solution presentation; runnable implementation; agent architecture; evaluation package; demonstration; responsible AI statement (see Section 10)	Live system execution; technical Q&A with the jury; codebase and deployment inspection
Who attends	All registered teams	Shortlisted finalists only

> **TIMES**
> Exact slot times, the submission cut-off time and the finalist list are announced on the WhatsApp Community and the website. 17 November is the Grand Finale date. Results are declared as described in Section 19.

06 PROBLEM STATEMENTS & TRACK SELECTION

AgentCraft has **seven official problem tracks** and one **Open Innovation track**, each aligned with an SDG. Each team picks **one track**. Tracks are real-world complex: agents must plan, reason, use tools, adapt to changing situations and deliver measurable outcomes.

You may model farms, villages, hospitals, recycling plants, disaster zones, energy networks or digital infrastructure as a simulated Minecraft-style block world. Agents act through defined tools or APIs and must respond to changing conditions. The numerical targets below are the measurable prototype goals for each official track. Open Innovation teams define their own, as described in Track 08.

TRACK	PROBLEM STATEMENT AND REQUIREMENTS	EXPECTED DELIVERABLE
01 VidyaMitra SDG 4: Quality Education **Difficulty: Very high**	**Mission:** Autonomous learning agent that finds hidden knowledge gaps, builds and revises personalised learning paths, and verifies that learning happened. **Mandatory:** At least 30 concepts with prerequisites and misconceptions in one subject; per-concept mastery estimates; revised (not fixed) learning paths; hints before answers; history kept across sessions; at least 5 misconception patterns detected; new assessment questions; improvement measured on held-out questions. **Advanced:** Gap vs careless mistake; handle strong easy-question but weak prerequisite learners; revise failed strategies; compare against a fixed learning-path baseline.	Working tutor, knowledge graph, learner-progress dashboard, reproducible test dataset, evaluation report.
02 KrishiMitra SDG 2: Zero Hunger **Difficulty: Very high**	**Mission:** Autonomous agent managing a simulated farm: when, where and how much to irrigate, with limited water. **Mandatory:** Soil moisture and temperature, ambient temperature, humidity, rainfall, crop stage and forecast data; at least 25 farm zones; detect missing, delayed, noisy and implausible sensor readings; zone schedules under a fixed water budget; revise plans when weather changes; report water use, crop stress and efficiency against a baseline. **Advanced:** At least 3 simultaneous disruptions; faulty sensor vs genuinely dry soil; no conflicting watering by zone agents; better water efficiency within crop-stress limits; explain each decision.	Farm simulation or replayable dataset, irrigation agent, field-zone dashboard, fault-handling demo, quantitative impact report.
03 AarogyaSetu AI SDG 3: Good Health and Well-being **Difficulty: Very high**	**Mission:** Reliable health-information agent that prioritises evidence, uncertainty and escalation over unsupported diagnosis. **Mandatory:** Approved corpus with source metadata and dates; cite supporting passages; ask follow-up questions; general prevention and screening information only; identify predefined emergency signs and direct to urgent care; abstain when information is insufficient or conflicting; minimise personal data; evaluate accuracy, citation correctness, escalation and unsafe-answer frequency. **Advanced:** Detect outdated or inconsistent documents; resist prompts that override safety rules; verify citations are real and support the claim; test on unseen, incomplete and misleading cases. **Safety boundary:** Use synthetic cases and trusted public information. No autonomous diagnosis or unsupervised treatment.	Health-information assistant, searchable evidence base, source-linked responses, safety test suite, evaluation report.

TRACK	PROBLEM STATEMENT AND REQUIREMENTS	EXPECTED DELIVERABLE
04 GreenGuardian SDG 12: Responsible Consumption and Production **Difficulty: Very high**	**Mission:** Autonomous circular-resource agent: identify waste streams, pick recovery pathways, coordinate collection and optimise reuse and recycling. **Mandatory:** Classify at least 10 waste classes (images, records or both); handle ambiguous, contaminated and mixed waste; choose reuse, recycling, composting or authorised disposal; schedule at least 30 pickup locations under vehicle and time limits; track quantities through each stage; coordinate agents without double-counting; respond to full bins, shutdowns and delays; measure recovery rate, contamination, transport cost, landfill diversion and losses. **Advanced:** Block contaminated material from incompatible streams; enforce mass balance; reroute when facilities go down; compare with a baseline; keep an audit trail per batch.	Waste-management simulator, classification and planning agents, material ledger, operational dashboard, impact evaluation.
05 RakshaGrid SDGs 11 and 13: Sustainable Cities and Climate Action **Difficulty: Extremely high**	**Mission:** Multi-agent disaster-response system for evacuation, rescue, supplies and shelters in a simulated flood or other disaster, replanning with incomplete information. **Mandatory:** At least 100 affected locations, 10 rescue units, 5 shelters and multiple depots; prioritise by severity, vulnerability, accessibility and report reliability; route around closures; allocate within available resources; distinct reconnaissance, rescue, logistics and shelter roles; replan on new incidents; handle delayed, missing and contradictory reports; record why each decision was made. **Advanced:** At least 5 unforeseen events; no double assignment of rescue units; balance urgency and fairness; handle communication outages without acting on stale data; compare response time, unmet critical needs, utilisation and fairness against a baseline. **Safety boundary:** All decisions are tested in simulation only, never for real emergency dispatch.	Disaster-world simulator, response agents, live operational map, event replay, quantitative evaluation.
06 GridMind SDG 7: Affordable and Clean Energy **Difficulty: Extremely high**	**Mission:** Energy-management agent coordinating renewables, batteries, building demand and critical loads in a simulated microgrid. **Mandatory:** At least 20 buildings, 3 renewable generators and 5 storage units, with critical and non-critical loads; forecast demand; estimate solar or wind output; optimise battery charging within limits; prioritise by criticality; coordinate generation, storage, demand and grid agents; prevent infeasible dispatch and overcharging; track cost, renewable use, peak demand, unmet load and critical-service reliability. **Advanced:** Handle forecast errors, spikes, outages and storage degradation; rolling planning horizon; compare with a fixed-rule controller and an optimisation baseline; recover safely from infeasible schedules; explain trade-offs. **Safety boundary:** Simulated grid only. No connection to physical infrastructure or live power control.	Microgrid simulator, energy-management agents, real-time dashboard, baseline comparisons, reproducible scenario results.

TRACK	PROBLEM STATEMENT AND REQUIREMENTS	EXPECTED DELIVERABLE
07 CyberSentinel SDG 9: Industry, Innovation and Infrastructure **Difficulty: Extremely high**	**Mission:** Defensive agent system that monitors synthetic logs, investigates incidents and recommends or runs authorised containment in an isolated sandbox. **Mandatory:** At least 3 synthetic data sources (for example authentication, application and network-flow logs); detect suspicious activity by rules, statistics, ML or a justified mix; correlate events into incident timelines; gather evidence and confidence; predefined defensive actions; authorisation and rollback for disruptive actions; record events, reasoning and actions; measure detection rate, false positives, time to detection, investigation quality and response correctness on held-out scenarios. **Advanced:** Unseen event combinations; malicious vs unusual-but-legitimate behaviour; resist prompt injection in logs and notes; catch conflicting conclusions; recover from failed actions and duplicate alerts; avoid containment on weak evidence. **Safety boundary:** Synthetic data and authorised isolated systems only. No real exploitation, unauthorised scanning or destructive actions.	Isolated cyber range, defensive agent architecture, incident dashboard, synthetic scenarios, auditable response engine, evaluation report.
08 Open Innovation Any relevant SDG	**Mission:** Pioneer novel agentic solutions beyond the seven tracks, such as healthcare diagnostics, cybersecurity defence, decentralised finance, adaptive education or automated scientific discovery. **Mandatory:** Choose and clearly define your own real-world problem and the SDG it serves; identify intended users; meet all shared engineering requirements (Section 7); define your own baseline, at least 30 held-out scenarios and success metrics; document data sources and assumptions. **Advanced:** Show measurable impact against your baseline, handle failures and changing conditions, and explain why the problem needs autonomous multi-agent behaviour. **Safety boundary:** Use synthetic or properly authorised data only. Follow the safety boundaries of the closest official track. No autonomous diagnosis, unsupervised treatment, live infrastructure control or real-world exploitation.	Working system, runnable code, evaluation report against your baseline, and all Round 1 items in Section 10.

- State your chosen track in the Round 1 PPT. Also state your assumptions and document where your data comes from.
- Starter data, APIs, baseline instructions, safety rules and evaluation formats are shared with registered teams on the official **WhatsApp Community**.
- Shared engineering requirements in Section 7 apply to all tracks.

07 TECHNICAL REQUIREMENTS & AI AGENT GUIDELINES

Build more than a chatbot. Build an agent that acts responsibly, verifies outcomes, recovers from failure and proves its impact. A fixed sequence of LLM calls is not enough.

SHARED ENGINEERING REQUIREMENTS: MANDATORY FOR ELIGIBILITY, ALL TRACKS

1. **Genuine autonomy.** Complete a multi-step task, select tools based on the current state, verify outputs and change plans when needed.
2. **Memory and state.** Keep persistent task-relevant state, record prior actions, avoid repeating completed work, and show recovery after failure.
3. **Multi-agent collaboration.** At least **two agents** with distinct responsibilities, explicit interfaces and a conflict-resolution strategy. Explain why multiple agents add value.
4. **Fault tolerance and safe actions.** Handle missing inputs, failed tools, timeouts and unexpected changes. Consequential actions must obey track constraints and approval rules.
5. **Reproducible evaluation.** Compare against a simpler baseline on at least **30 held-out scenarios**. Report task success, failure modes, resource use and track-specific metrics. Organisers may rerun your tests independently.

WHAT YOUR DEMO MUST SHOW

1. Input or context given to the system.
2. Agent reasoning or plan.
3. Tool or API actions taken.
4. Final output or result.
5. At least **one failure or recovery case**.

FINALE READINESS

In Round 2 the jury runs **live system execution** and inspects your **codebase and deployment**. The organisers may introduce an **undisclosed scenario** within the published problem scope. Keep your repository, running build and a fallback (recorded demo or screenshots) ready.

- State clearly what is implemented, what is simulated and what is still incomplete. Do not claim results you have not tested.
- Disclose model choices, external services, data sources, limitations and evaluation assumptions.

08 PERMITTED TOOLS, TECHNOLOGIES & AI USAGE POLICY

ALLOWED	NOT ALLOWED
Python	**Pre-built proprietary projects** (disqualified)
LangGraph, AutoGen, CrewAI, LlamaIndex	Work from earlier projects or competitions presented as new
Custom agent runtime loops	Code, models or data used against their licence
Open-source libraries and APIs	Fabricated demos or results
AI coding assistants, with disclosure	

AI USAGE POLICY

- You may use generative AI and coding assistants, but you must disclose them in your PPT or README.
- You must be able to explain every component of your system to the jury.
- List the models, frameworks, APIs and datasets you use, with credits.
- Never put API keys or secrets in slides, repositories or demos.

09 DEVELOPMENT GUIDELINES & RESOURCE USAGE

- Build the solution yourselves during the competition period.
- Keep the code in a version-controlled repository (Git) with a visible commit history.
- Add a README: setup steps, architecture, models, APIs, datasets and licences.
- Keep API keys in environment variables.
- Costs for APIs, cloud services and compute are borne by the team. Organisers do not guarantee credits, compute or internet access.
- Design for failure: keep a local or recorded fallback if a live service fails.
- Starter datasets, APIs and baseline instructions are shared by the organisers. Use them only for this challenge.
- For the finale, bring your own laptop, chargers and adapters. Venue equipment details are announced before the finale.

10 SUBMISSION GUIDELINES & DELIVERABLES

ROUND 1 DELIVERABLES (ONLINE, DEADLINE 2 NOVEMBER 2026)

DELIVERABLE	DETAILS
Solution presentation	Use the official AgentCraft PPT template. Cover problem definition, users, novelty, architecture, workflow, results, limitations and SDG impact. Template slides: track and problem statement title, team details, problem statement, proposed solution, targeted users and SDG impact, agentic AI workflow, system architecture and tech stack, impact and feasibility, safety, security and limitations, conclusion.
Runnable implementation	Source code, setup instructions, dependencies and a reproducible execution command.
Agent architecture	Roles, tools, memory design, state transitions and coordination strategy.
Evaluation package	Baseline, held-out test results, failure analysis and metric calculations.
Demonstration	Live or recorded execution showing successful operation and at least one failure or recovery scenario.
Responsible AI statement	Data sources, privacy safeguards, limitations and safety boundaries.

ROUND 2 DELIVERABLES (OFFLINE, 17 NOVEMBER 2026)

- Live system execution.
- Final presentation and technical Q&A with the jury.
- Codebase and deployment inspection.

SUBMISSION RULES

- **Round 1 submission deadline: 2 November 2026.** Only the team leader submits, once per team, through the official channel.
- Late submissions are not accepted. If you resubmit before the cut-off, the latest valid version counts.
- Incomplete packages (for example no runnable code or no evaluation package) may be rejected.
- Keep copies of your final files and any submission receipt.

11 EVALUATION CRITERIA & JUDGING RUBRIC

All teams are scored out of 100 against the published criteria below. Teams are ranked within their stream (Stream A or Stream B, see Section 3).

CATEGORY	POINTS	WHAT JUDGES EVALUATE
Agent autonomy and planning	20	Multi-step execution, tool selection, replanning
Technical depth and architecture	20	Algorithms, data flow, coordination, engineering quality
Reliability and safety	20	Failure recovery, constraints, uncertainty, safe behaviour
Measurable performance	20	Baseline comparisons, held-out tests, track-specific outcomes
Innovation and real-world impact	10	Novelty, feasibility, SDG relevance
Demonstration and reproducibility	10	Working demo, documentation, repeatable results
Total	**100**	

JUDGING RULES

- A polished UI cannot make up for an agent that fails its core task.
- Unsupported claims of accuracy or impact earn no performance points.
- Judges reward outcome and reliability, not the number of agents, model size or interface polish. A simpler, more reliable design can beat a complicated one.
- The organisers may introduce an undisclosed scenario during the final demonstration.
- Safety-critical failures may cap the score or lead to disqualification.
- Round 1 shortlists teams for the finale. The number of finalists is announced after screening.
- Ties are broken by the measurable performance score, then by reliability and safety.
- The jury's decision is final (see Section 20 for grievances).

12 DEMO, PRESENTATION & Q&A GUIDELINES

	ROUND 1: ONLINE	ROUND 2: OFFLINE
Do before	Test screen share, audio, dependencies and API authentication before your slot.	Arrive early, set up your device and test your demo at the venue.
Present	PPT, running solution and AI agent demo.	Final presentation with live system execution.
Q&A	Short questions from the jury.	Technical Q&A plus codebase and deployment inspection.
Time limits	Announced before the round.	Announced before the round.

SUGGESTED FLOW

1. Problem and intended user. 2. SDG relevance. 3. Agent architecture and tools. 4. Live input-to-output demo. 5. Results and limitations. 6. Next steps and Q&A.

- Keep claims measurable and answer questions honestly. Say "not implemented" when something is not.
- Include at least one failure or recovery case in your demo. Expect an undisclosed scenario in the finale.
- All team members should be able to answer questions. Be present on time for your slot.

13 CODE OF CONDUCT

- Treat participants, mentors, judges, volunteers and staff with respect. Harassment and discrimination are not tolerated.
- Follow instructions from organisers and MIT AOE campus rules.
- Do not disrupt events, services, submissions or another team's work.
- Do not misrepresent your identity, affiliation, team contribution or results.
- Use the official support channels to raise issues.

14 ACADEMIC INTEGRITY, PLAGIARISM & DISQUALIFICATION

- Submit original work. Credit all third-party code, models, data, media and substantial AI-generated content.
- Do not copy another team's work or claim someone else's results as yours.
- Pre-built proprietary projects are not allowed.
- Safety-critical failures may cap or disqualify a submission.

GROUNDS FOR DISQUALIFICATION

VIOLATION	EXAMPLE
Plagiarism	Copied code, ideas or slides without credit
Pre-built or reused projects	A proprietary or earlier project presented as new
Fabrication	Fake results, fake demos or false claims
Cheating or interference	Probing the portal, other teams' accounts or submissions
Misconduct	Breaking the Code of Conduct or ignoring organiser instructions
Identity or eligibility fraud	False member details, extra members, ineligible participants

The organising committee reviews the evidence and may disqualify a team at any stage. The decision is communicated to the team leader. Disqualified teams forfeit prizes and the registration fee.

15 RESPONSIBLE AI, ETHICS & SAFETY GUIDELINES

- Do not build agents intended to harm people, enable illegal activity or bypass access controls.
- Use human oversight for high-impact or consequential actions.
- Test likely failure cases and explain safeguards and limitations in your PPT.
- Be transparent about bias, errors and uncertainty in your outputs.
- Do not demonstrate unsafe actions against real systems, services or people.
- Respect each track's safety boundary (Section 6): synthetic data, simulation only, no real-world exploitation, no autonomous diagnosis, no live infrastructure control.
- Solutions should respect the SDG intent: do no harm to communities or the environment.

16 DATA PRIVACY & INFORMATION SECURITY

- Use only data you are authorised to access. Minimise personal or sensitive data.

- Do not expose credentials, API keys, private records or personal information in slides, logs, demos or public repositories.
- Anonymise personal data used in demos.
- Do not probe the event website, portal or another team's accounts, systems or submissions.
- Report any suspected data exposure or security issue to the organisers immediately.

17 INTELLECTUAL PROPERTY & OPEN-SOURCE LICENSING

- **Ownership:** teams keep ownership of their own code, designs and ideas.
- **Display rights:** by participating, teams allow the organisers and sponsors to showcase team names, screenshots and demo videos for event and promotional purposes.
- **Third-party material:** follow the licence of every library, model, dataset and media file you use, and credit it.
- **Open source:** teams are not required to open-source their code. If you do, check your dependencies' licences first.
- Do not submit confidential employer, client or sponsor data.
- Internship evaluation by sponsors may need access to project details. Teams will be asked before anything beyond the demo is shared.

18 PARTICIPANT DASHBOARD & SUBMISSION PORTAL RULES

- Register and log in using the **REGISTER** and **LOGIN** buttons on the official website.
- Use only links shared through the official channels (Section 23). Do not trust forwarded or unofficial links.
- Submit through the official channel announced for each round. Email or Drive links are accepted only if the organisers say so.
- One submission per team, made by the team leader. Do not share account passwords, API keys or payment credentials.
- Check that your upload is complete and keep the confirmation.
- If the portal has an outage, contact the coordinator **before** the deadline. Outage claims after the deadline are not entertained.

19 PRIZES, AWARDS & RESULT DECLARATION

TOTAL PRIZE POOL: ₹30,000

The pool covers all cash awards across Stream A and Stream B. It is not a per-team amount. The split across positions is announced by the organisers.

REWARD	DETAILS
Cash rewards	Awards for top-performing teams across the FY and senior evaluation streams
Internship opportunities	Winners get internship opportunities with sponsor partners, subject to sponsor evaluation and performance in the Grand Finale
Certificates	Certificates of Excellence authorised by the AAAI Global Professional Chapter and MIT AOE

- Results are declared by the organisers after the Grand Finale judging, on the official channels.

- The jury's decision is final. Prizes are subject to the rules in this rulebook.

OUR SPONSORS

SAGVEEK Technologies Pvt. Ltd. INDUSTRY PARTNER Technology & Cloud Solutions	AiSyntelligence LLP AI ECOSYSTEM PARTNER Agentic Intelligence & Research	Capabl. CAREER & PLATFORM PARTNER Skill Acceleration & Internship Pathways

20 GRIEVANCE REDRESSAL & APPEALS

1. Email the coordinator or message the official contact within **24 hours** of the decision or incident.
2. Include: team name, round, date and time, a clear description of the issue and any evidence.
3. The organising committee reviews the matter and replies through the same channel.
4. The committee's decision after review is final.

- Scores, jury decisions and the shortlist cannot be renegotiated. Appeals are limited to procedural or technical errors.
- Do not include passwords or sensitive personal data in a grievance.

21 ORGANIZER RIGHTS & RULE AMENDMENTS

- The organisers may change the rules, schedule, venue, format, tracks or prize details when needed.
- Changes are announced on the official WhatsApp Community and website. The latest announcement prevails.
- The organisers may postpone, reschedule or cancel the event for reasons beyond their control.
- The organisers may disqualify any team or participant for breaking the rules.
- The organising committee's interpretation of these rules is final.

22 TERMS & CONDITIONS

1. Registering means the team accepts this rulebook and any later announcements.
2. All information given at registration must be true and complete.
3. Teams are responsible for their own devices, internet, accounts and API costs.
4. Travel, food and accommodation for the finale are the team's responsibility unless the organisers announce otherwise.
5. Participants must follow MIT AOE campus rules during the finale and keep their belongings safe. The organisers are not liable for loss, damage or injury.
6. Event photos and videos may be used for publicity (see Section 17).
7. Internship opportunities are offered by sponsor partners and depend on their evaluation. The organisers do not guarantee an offer.

DISCLAIMER

AgentCraft is an educational innovation hackathon. It is not an official Minecraft product and is not approved by or associated with Mojang or Microsoft.
